

Sustainable energy solutions for industrial customers

Our solutions for an innovative, sustainable and future-proof orientation of your company

Industrial Decarbonization

As one of the largest energy consumers and emitters of carbon dioxide (CO₂) in Germany, the industrial sector is responsible for ~29 % of the final energy consumption in Germany.

The creation of energy-efficient and carbon-efficient energy supply systems and production processes is therefore one of the most important drivers for reducing CO₂ emissions.

Impact on industrial companies

Due to the growing public debate and a tightening regulatory environment, sustainability is becoming more and more important for industrial companies:

- Embedding sustainability in corporate strategies
- Transparency and disclosure regarding environmental impact
- Sustainability as a marketing tool to address increasing consumer awareness
- Reduction of emissions to save CO₂ costs

Our Solutions

Innovative energy solutions with our tool QuaSiMo

- › Development and evaluation of innovative and future-proof energy supply systems under consideration of technical, economical and ecological evaluation criteria

Critical review and benchmarking

- › Critical analysis and benchmarking of products, prices, energy procurement strategies, contracts, energy supply plants, potentials for renewable energies, ...

Sustainability strategies and roadmaps

- › Development of strategies as well as identification and planning of actions to anchor sustainability in the company

Insights: QuaSiMo (www.quasimo.de)

The Excel-based QuaSiMo is operated via user-friendly cockpits:

Energy demand scenario

Energy production

Facilities

Economic analysis

- › Detailed view of a defined energy supply solution
